

Quantum™ Leaps

innovating embedded systems

Quantum Leaps™, LLC employs a unique, open source-friendly business model called dual licensing. This business strategy combines the software quality and distribution benefits of an open source model with the software licensing revenue model of a traditional commercial software vendor.

Open Source Licensing

Selected Quantum Leaps software components may be distributed and modified under the terms of the GNU General Public License version 2 (GPL) as published by the Free Software Foundation. Please note that GPL Section 2[b] requires that all works based on this software must also be made publicly available under the terms of the GPL ("Copyleft").

Commercial License Options

- **Single Product License**—valid for royalty-free distribution of a single product, any number of units, for the life of the product. If a complex product contains more than one processor (e.g., a car), a separate Single Product License is required for each different copy of the Quantum Leaps software distributed within the product.
- **Custom License**—The precise terms of these licenses are flexible and can be negotiated to balance your budget and legal needs.

Commercial Licensing

Quantum Leaps commercial licenses are designed for customers who want to retain the proprietary status of their code and therefore cannot use our products under GNU General Public License. The customers who license Quantum Leaps software under the commercial licenses do not use the software under the GPL and therefore are not subject to any of its terms.

Pricing*

Component	Licensing Terms	Single Product	Custom License
QEP in C	dual licensing	\$700	ask for pricing
QF ¹ in C	dual licensing	\$700	ask for pricing
QK ² in C	dual licensing	\$400	ask for pricing
